

A treatise on algebra, in theory and practice

Filesize: 5.05 MB

Reviews

This pdf might be well worth a study, and a lot better than other. It really is simplistic but excitement inside the fifty percent in the book. Its been printed in an exceedingly straightforward way which is just after i finished reading this ebook through which really modified me, modify the way i believe. (Derick Brekke)

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 34 pages. Dimensions: 9.7in. x 7.4in. x 0.1in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1854 Excerpt: . . . $8z - 35z$ 18. Bringing the unknown quantities to one side, and the known to the other, $8 - 5z$ 318. Example 2. $-2y - 3 - 80$. Bringing the unknown quantities to one side, and the known to the other, $2j - 3y$ 148. Example 3. $-ax - 1614 - bx$. Bringing the unknown quantities to one side, and the known to the other, $ax - bx$ 16--14. Bringing a quantity from one side of an equation to the other, with its sign changed, is the same as adding the quantity, with its sign changed, to both sides. Thus, $3a; -1611$ becomes $3a; -1616$ 11 16; which is equivalent to $3a$ 11 16. For 5, when equals are added to equals, the sums are equal. 11. It follows, that we may change all the signs in an equation, without destroying the equality. For this is the same as transposing all the quantities, and reading the members 1 in the opposite order. 12. III. Adding. Example 1. $-4y3y - 21315 - 14$. Adding the unknown quantities together, and the known, $5y$ 14. Example 2. $-2z6s16 - 64$. Adding the unknown quantities together, and the known, $4z - 48$. Then, changing all the signs 11, Example 3. $-a2aax -$ and $r3a3i$. Adding the unknown quantities together, and the known, $(a2a6)a3(a6)$. This part of the rule requires no demonstration. 13. IV. Dividing. Example 1. -530 . Dividing both sides, by 5, 30 y 5 6. Example 2. $-(a-b)x - c$. Dividing both sides, by $a6$, $a - b$ Example 3 $(c-d)ze2 - cP$. Dividing both sides, by $c - d$, $sc - dcd$ We require the value of the unknown quantity taken only once: and, therefore, we divide both sides by its...
